

Site Review Notes

Creative Director: Erin Noh/ Designer: Dongyoon Lee

Project Title: Coco Chanel Website

Landing page:

- I like that you added the logo to the landing page and the simplicity of it
- When I change the size of the screen, only the "legacy" tab falls to the bottom which looks a little awkward

About page:

- For the "About" page, I think you can just have all the text in one block, without having to insert the scroll function. I also think the image can be shorter and does not have to scroll down! (Try to fit everything on one page)
- Add a tab or space in between the two paragraphs under "Early Life"

Fashion page:

- For the subheadings under Fashion with the scroll bar, it is a little awkward that only a little bit of "Little Black Dress" is showing - either hide it all or show it all
- I would also align the position of the subheading scroll bar and the text on the side
- Maybe try adding different pictures to the "Fashion" page

Legacy page:

- Try to make the image smaller/shorter instead of having it to be scrolled down

Other points:

- When you click on the other subpages, I think there should be a header that says "CHANEL" somewhere instead of just "HOME"
- If you have time, try to make the pages responsive!!
